HEADLINE: Jeffrey H. Miller Earns SCOR Professional Certification

BODY:

Livonia, MI – Jeffrey H. Miller, PE, CPIM, SCOR/P of Productivity Engineering Services, was recently awarded the SCOR Professional Certification (SCOR/P). SCOR/P is a program offered by the Supply-Chain Council (SCC) to create a consistent global standard for excellence in using the Supply Chain Operations Reference Model (SCOR), a tool used by nearly 1,000 successful organizations around the world to evaluate and improve supply chain performance.

Jeffrey H. Miller, PE, CPIM, SCOR/P is the founder and Principal of Productivity Engineering Services in Livonia (www.PESsolutions.com) – an independent industrial engineering and operations management services firm helping companies achieve operational excellence.

Jeffrey has over 25 years of proven experience helping dozens of companies make their operations leaner and more productive. Jeffrey attended the University of Michigan where he earned both a Masters and a Bachelors of Science degree in Industrial and Systems Engineering.

To qualify for the SCOR/P designation, a candidate must have a minimum of 5 years experience in supply chain, complete a rigorous course of study and a comprehensive examination. Like the SCOR model itself, SCOR Certification is based on real-world techniques for measuring and managing a global supply chain, not on concepts and abstractions. SCOR-Certified Professionals can help a company dramatically raise its proficiency at supply chain improvement. All supply chain professionals who have earned the certification will possess common concepts, processes, terminology, and metrics, all of which are critical to standardizing supply chain processes across a large, global organization.

Based in Washington, DC, the Supply-Chain Council (www.Supply-Chain.org) is a global non-profit association whose methodology, diagnostic and benchmarking tools help member organizations make dramatic and rapid improvements in supply chain processes.
